➢ Bio renders the avatar and bio information of a user
➢ Viewedpost renders the post that the current user is trying to view for Display Post.
➢ Display Post renders the bio and post information of a specific post.

Founder Contribution

Avery: Created components for Bio and Viewed Post which are utilized in displaypost.

Evan: Created components for a tag bar and search results, and integrated it into search.html. Fixed some bugs that prevented compilation.

Hana: Created the User Settings page and helped write the base code for the NavBar.

Huy: Created the AddPost, Editpost, and APButtons, and integrated it into the addpost.html and editpost.html. Made some edits to navbar.

Jonathan: created messages page and the components for it

Kazi: Fixed errors with app.js and index.html to ensure that our website looks the way it is supposed to be and can be run with npm run serve. Before I fixed the errors, our website could not run with npm run serve because the errors prevented it from running our website. After fixing the errors, our website can be run by npm run serve.

Saul: Created posts page and components. Extracted navbar into component

Bugs

- The layout for the messages page is not the way it should be. Gonna take a look at the HTML and refigure the code so that the components display correctly.
