Add a report to your repository as reports/submission_05.pdf that:

- Carefully articulate the outstanding bugs in your submission and a plan on how you intend to fix your issues
    - You **must** provide this information in your document otherwise we will assume a fully functional submission and score you accordingly
- Describes your product's key React components, and what parts of the UI they are responsible for.
    - Example: Feed renders the user's content feed on the main page
    - Example: FeedItem renders a single post within a user's Feed
    - Example: OnlineList renders the user's list of online friends within the product's chat feature
- Describes what each startup founder contributed to in this submission
- Describes any product features you have decided to cut
- If your mock objects are different from your previously submitted ER diagram, include an updated ER diagram in the report

1: React Components

- Addpost: Shows the page in which users use to create a post item
- Editpost: Shows the page in which users use to edit a post item they own
- Messages: Shows the list of "message threads" a use is in and the details for the selected message thread.
- Thread: Shows the current message thread that is selected, allowing the user to send a new message on that thread
- ThreadList: Displays a list of all the message threads a user is a part of, allowing them to click on one to select it
- Posts: Displays the format of a post created by any user
- Profile: Displays profile of selected person. The user's profile page when selected from drop down menu in navbar
- HomeScreen: Displays the website's homepage with which users can see posts from other users.
-
- Settings: Displays a list of options user can change. (i.e. username, biography, adding a new post, editing and or deleting a post)
- Search: Shows a list of posts that were searched for along with tags.
- Display Post opens up the post information, description, and user bio of the person who posted
- Bio is the avatar and bio information of a user

2: Bugs

- Messages: The first thread is not connected by default.sub
- Messages: No button to create a new message with a user.

3: Founder Contribution

- Huy Nguyen
    - Addpost
        - Added the ability for buttons to be selected or unselected when clicked
        - Added the ability for the other tag textarea was able to create for button tags, and when a duplicate tag was entered, the tag with the same name is selected instead
        - Made the clear button clear all text areas in the page, and make all tag buttons unselected
        - Made the delete button move to the home page
        - Prevent enter from being inputted into the title textarea
    - Editpost:
        - Made the page similar to Addpost, but with a couple different buttons
- Saul Shanabrook
    - Messages
        - Broke up into multiple components
        - Add selection of threads and message sending
        - Add sendMessage, getThreads, and getUser server.js functions
    - Add PropTypes for some types in app/propTypes
- Kazi Ahmed
    - HomeScreen
        - Changed the constructor to get all posts
        - Set the first screen displayed to be the HomeScreen when viewing website
        - Added posts to be displayed through React with the constructor
        - Imported the ability to see post pages by clicking on posts
- Jonathan Shepherd
    - Profile
        - Gets user information from server to display
        - Set default profile to current user
        - Created a method to receive selected users post from database
- Hana Ohinata
    - Settings
        - Changed settings to display "Change username", "Change bio", "Add Post", "Edit or Delete Post"
        - Made it so that they could jump to the add post page through the link provided
- Evan Busha
    - Search
        - Made the Posts component and database uniform

- ■ Modified Posts component to use some more props
- ■ Added more tag functionality
- ● Avery Samuel
  - ○ Display Post, Bio
    - ■ Linked display post to the search page so it opens when the post is clicked on.
    - ■ Formatted Display post to load the information of the post into the component

4: Functions Not Implemented Due to Time Constraints

- Addpost sending the post information to the server
- Tag buttons leading to a page of posts with the tag clicked on
- Clicking on a post will take you to its page
- Getting the profile to display the user's posts
- Editpost obtaining and sending information to the server
- Settings can not change name and bio, did not link to edit or delete post.
- Bio: Can't correctly link it to display post
- Display Post : Messages doesn't bring you to messages
- Clicking back doesn't bring you back to the search screen
